

Day 1 Roundtable for Future livestock production

Programme Outline

- Reaching Net Zero in livestock production
- Accelerating the digital transition of animal agriculture
- Facilitating greater collaboration between animal health companies, start-ups, investors and food producers to advance new treatments
- With a growing number of novel products and technologies being commercialised, how is their efficacy on the farm meeting clinical expectations?
- Genetics & sustainability: optimizing crossbreeding for dairy-beef calves.
- Lessons from early-adopters of precision livestock solutions that can help guide developing more effective solutions.
- Smart ag solutions: the role of AI in animal health and nutrition.
- Systems integration and data standardisation to improve success with precision livestock farming.
- How are AgTech adoption cycles unique?
- What strategies should technology companies prioritize to ensure that precision livestock farming platforms provide targeted and actionable recommendations that are both time and cost efficient for farmers?
